Part One: Introduction and Installation

Introduction: Why Git and GitHub?

What's the difference between Git and GitHub.

Git is a **version control system** that is like a supped up version of the “Track Changes” feature within Microsoft Word. Git allows the different collaborators on a project to track changes and revert to older versions if needed.

GitHub is a cloud based platform built around Git that stores code ***pushed*** to it from a computer that uses Git.

Register for a GitHub Account

Upgrade R and RStudio

Install Git

Bonjour Git, enchanté

Optional: Install a Git client
